

IN THE SPECIFICATION AND ABSTRACT:

Enclosed is a Substitute Specification with an Abstract added. A marked copy of the Substitute Specification is also enclosed. No new matter is added.

SUBSTITUTE SPECIFICATION

ABSTRACT OF THE DISCLOSURE

In a method and device for control of a printer or copier, data are transferred over at least one data line between at least a first control unit and a second control unit. Respectively one identifier is associated with the first and second control unit. At least one value of a data object is stored in a storage region of the second control unit. A third identifier is associated with the data object, whereby the first, second and third identifiers are network addresses.
